### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Drawings***

The drawing corrections filed November 2, 2004 have been approved.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Okamoto et al. Okamoto et al. discloses a door for a vehicle comprising an outer panel 1, an inner panel 2 having longitudinal front, rear and lower edges (not numbered, but shown in figure 1) with a central portion open to form a central opening (not numbered, but shown in figure 1), the inner panel has an inner edge (not numbered, but comprising the portion of the inner panel 2 including the channel 7) and a base plate B to which at least a window regulator module 31 is assembled and which is attached to the inner panel so as to wholly cover the central opening of the inner panel wherein the base plate has an inner edge 24 in contact with the inner edge of the inner panel, a belt line reinforcement 13.

Claims 1, 5, 6, 9-11 and 13-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakaguchi et al. Sakaguchi et al. discloses a door for a vehicle comprising an outer panel 13, an inner panel 20, 21, 22 having longitudinal front, rear

and lower edges (not numbered, but shown in figure 2) with a central opening (not numbered, but shown in figure 2), the inner panel has an inner edge (not numbered, but shown in figure 2 adjacent the central opening) and a base plate 12 to which at least a window regulator module 50 is assembled and which is attached to the inner panel so as to wholly cover the central opening of the inner panel wherein the base plate has an inner edge (not numbered, but shown in figure 2) in contact with the inner edge of the inner panel, wherein the base plate is attached to the inner panel so as to cover the central opening from a vehicle compartment outer side of the inner panel, a belt line reinforcement 44.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sakaguchi et al. as applied to claims 1, 5, 6, 9-11 and 13-16 above, and further in view of Baldamus et al. Baldamus et al. disclose the use of screws 16 to attach an inner panel to a base plate.

It would have been obvious to one of ordinary skill in the art to provide Sakaguchi et al. with screws, as taught by Baldamus et al., to increase the ease of assembling the door.

### ***Response to Arguments***

Applicant's arguments filed June 23, 2005 have been fully considered but they are not persuasive.

With respect to the applicant comments concerning Okamoto et al., the examiner respectfully disagrees. The inner panel of Okamoto et al. has an inner edge as shown in figure 1 and figure 3. In figure 3 the inner edge is shown as including a channel 7. Additionally, the base plate, also shown in figure 3, includes an inner edge 24.

With respect to the applicant comments concerning Sakaguchi et al., the examiner respectfully disagrees. The inner panel Sakaguchi et al., as shown in figure 2, includes an inner edge comprising that portion of the inner panel defining the opening. Additionally, the base plate includes an inner edge which comprises that portion of the base plate which is bolted to the inner panel. See figure 3.
